

Broadband Fixed Wireless

CyberLynk, a Midwest leader in the Internet Service industry maintains a wired network to provide service to customers. CyberLynk is now building a Wireless network to compliment its existing wired network. This new network currently provides a broadband fixed wireless connection to the Internet with speeds up to 3Mbps. A 10Mbps broadband fixed wireless connection is also available in certain areas with restrictions.

This network of fixed cells provide the ability to deliver high-speed Internet connections to businesses that are located within line-of-sight of one or more of our cells. The network has built-in redundancy to provide a reliable connection.

This new service has been labeled "CyberLynk AIR". CyberLynk AIR saves on installation costs and eliminates telephone company charges. CyberLynk AIR availability covers a much broader area than DSL.

Since CyberLynk AIR does not use "wires," there are no telephone company installation issues. An appointment can be made within days and the installation of the antenna, radio and router usually takes less than 2 hours.

CyberLynk AIR is a 24-hour 'always on' Internet connection. This makes it an alternative to wired services like T1 and DSL, which are also 24-hour 'always-on' services.

Not only is CyberLynk AIR an incredible connection option, CyberLynk also includes extra services with each CyberLynk AIR connection that make the service unbeatable. All CyberLynk AIR customers receive domain hosting with unlimited e-mail addresses, two analog dial-up accounts for use from home or as a backup from the office, and toll-free access for when you are on the road.

CyberLynk provides, owns and maintains all required equipment *.
